Brian E. Pineda

US Citizen | New Brunswick, NJ

(732) 524-8230 brian.pineda.work@gmail.com LinkedIn GitHub brianepineda.com

Education

Rutgers University **Expected May 2029**

B.S. in Computer Science and Electrical Engineering — GPA: 3.8/4.00 — Dean's List *New Brunswick, NJ*

Relevant Coursework: Artificial Intelligence, Data Structures, Design & Analysis of Algorithms, Data Management, Programming Languages, System Programming, Computer Architecture, Discrete Structures

Experience

Software Engineering Intern **May 2026 – Present**

361Firm *Remote*

- Spearheaded the platform's migration from the **Airtable REST API** to **Supabase (PostgreSQL)**, speeding up record lookups, securing sensitive investor data with row-level access, and lifting a hard limit that had capped how many users and deals the platform could support as the business scales
- Hardened **6** public **REST API** write routes in **Next.js** with a single reusable check that screens every user submission, blocking malformed and malicious input before it could reach the database, backed by **20 unit tests**
- Built the attendance tracking behind live investor events, a tested **JavaScript** layer that gives organizers an accurate, real-time headcount as guests scan in by QR code, fixing a flaw where repeat scans inflated the count and the screen disagreed with the server, backed by **26 unit tests**
- Reorganized a **9,000-line** single-file **React** client into modular, tested pieces and introduced the codebase's first automated testing (**123 cases** across the platform), making it faster for teammates to add features and catch bugs before they shipped

Projects

GenCost | *Python, FastAPI, Next.js, Supabase* **April 2026**

- Built a **metering proxy** and **smart router** that intercepts every generative-AI API call across **6 providers** (LLM, voice, image, video), logging real **cost and latency** to a live **Next.js** + **Supabase** dashboard
- Engineered a **cost-aware router** that routes each request to the cheapest model clearing a **Draft/Standard/Premium** quality tier, with **fallback chains** and **circuit breakers**, covered by **39 unit tests**

PC Forecaster | *Python, scikit-learn, Flask, SQLite, Pandas* **Jan – May 2026**

- Built and shipped a **live** PC-parts price forecaster (**Python**, **scikit-learn**, **Flask**, **Vercel**) that forecasts **12 months** of prices and calls buy-or-wait, hitting **R^2 0.85 to 0.89** on real prices the model never saw
- Engineered a **5-stage Python pipeline** (**pandas**, **SQLite**) that cleaned **9,452 records** into **6,078 components** and blended a **71,000-row** price history that captured the 2025 memory shortage

FlexMore | *TypeScript, React, Vite, MediaPipe* **June 2026 – Present**

- Built a hands-free **webcam workout coach** that counts reps and checks form in real time with **MediaPipe**, running **fully on-device** so no video ever leaves the machine
- Engineered a pure **TypeScript** analysis core with pixel-space angle math, one-euro smoothing, and a hysteresis rep counter, verified headless across **58 unit tests**

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, C, C++, HTML/CSS
Web & Frameworks: React, Next.js, FastAPI, Flask, Node.js, REST APIs, Vite, Tailwind
Testing & Tooling: Vitest, CI pipelines, Git/GitHub, AWS, Supabase, Vercel
AI Dev Tools: Claude Code, Cursor, GitHub Copilot, Claude API, prompt engineering, LLM API integration

Leadership / Extracurricular

Member **May 2026 – Present**

ColorStack *Rutgers University, New Brunswick, NJ*

- Engaged with the community through hackathons, networking events, and professional development opportunities

Public Relations Chair **September 2025 – February 2026**

Mexican American Student Association (MASA) *Rutgers University, New Brunswick, NJ*

- Produced 2 to 3 promotional pieces weekly with the executive board, driving stronger event engagement and visibility across the organization
- Led the organization's social media strategy and digital presence, keeping messaging consistent and on brand across channels
